CiPHA Markets

THE 500 FELLOWSHIP · BATCH 37

AI agents on your trading account.

An AI agent platform to help retail and prop traders who already have broker accounts with inconsistent manual execution by running a multi-agent council that deliberates, validates in code, and executes on their connected account—non-custodial, with Autonomy or Do-it confirmation.

Founder Sylvester Kwabena Dapaah

cipha.app

PROBLEM

Traders already have accounts. Execution is still the bottleneck.

What traders live with today

- Manual chart-watching and late entries/exits
- Signal groups that tell you *what*—not how to execute on *your* account
- Copy-trading and black-box bots that obscure risk and control
- Prop challenges where inconsistent execution kills funded status

What they actually need

- Controlled AI agents on the broker/prop account they already own
- Non-custodial — capital stays with their broker
- Transparent deliberation + code validation before any order
- Choice: full Autonomy, or confirm with Do it

CiPHA Markets is not a signals app. Agents run on the trader's own connected account.

SOLUTION

Multi-agent council → validate → execute.

1. Deliberate

A multi-agent council debates the trade thesis on the trader's connected account context.

2. Validate

Deterministic code checks the proposal before anything reaches the broker.

3. Execute

Autonomy auto-executes, or the trader confirms with **Do it**.

Non-custodial by design

AI agents on the trader's own broker or prop account. CiPHA never holds funds.

Integrations live

cTrader · TradeLocker · Match-Trader · MetaApi (MT4/MT5) · Deriv

HOW IT WORKS

From your account to a trade, in the open.

Connect any broker or prop account. The desk debates, then trades it — under your rules.

01 **Connect your account** — Link any broker or prop. Money stays where it is.

02 **The desk debates** — Bull, bear, validator — one plan: entry, stop, target.

03 **It trades to your rules** — Agents place the trade. Prop limits stay enforced.

04 **You audit every session** — Full debate and outcome on the record. Nothing hidden.

CiPHA Markets · AI agents on your account

TRACTION · JUN–SEP 2026

Paid users. Prop passes. Zero ad spend.

19
Paid active users
(prop + real accounts only — no demo)

~10k GHS
Subscription revenue
Jun–Sep 2026 (incl. product pauses)

6
Prop-firm accounts passed
(3 in first live week)

Prop accounts passed (cumulative)

Latest pass: Wed before 26 Sep 2026. More passed late Aug–now.

- Open web app ~every 4 hours
- Zero marketing spend
- Users mostly Ghanaian non-friends; 1 Indian (early X post); 1 Nigerian paid once
- Free month → 30+ new users to monetize after 26 Sep 2026
- Price path: 55 GHS/mo → now $79/mo (changed ~5×; people still paid from day one)

BUSINESS MODEL

Simple SaaS. Honest pricing history.

$79/mo

Current subscription price

55 GHS/mo

Started here — payers from day one

~10k GHS

Jun–Sep 2026 subscription revenue
(multiple product pauses incl. Sep)

Model

Monthly SaaS for AI agents on the trader's own connected broker/prop account. No custody of capital. No demo accounts in the paid base.

Pricing honesty

Price changed ~5 times (55 GHS/mo → $79/mo). People still paid. Free month running into a 30+ user cohort to monetize after 26 Sep 2026.

COMPETITION

Not another signals feed.

Signals apps

Tell traders what to do. Execution and account risk stay on the human — inconsistent and slow.

Copy trading

Blind following. Little visibility into why a trade fires on your account.

Black-box bots

Opaque automation. Hard to trust for prop rules and retail risk control.

Manual trading

Full control, but fatigue and inconsistency — especially under prop constraints.

CiPHA wedge

AI agents on **your** broker/prop account — non-custodial. Multi-agent council deliberates, deterministic code validates, then Autonomy auto-executes or you confirm with Do it. Controlled agents, not a signals app.

MARKET

Beachhead where we already collect.

Beachhead

- Paying retail and prop traders on platforms we already integrate
- cTrader, TradeLocker, Match-Trader, MetaApi MT4/MT5, Deriv
- Prop + real accounts only (no demo) — users who feel execution pain

Expansion path

- Grow inside existing broker/prop ecosystems we support
- Add integrations where traders already fund and trade
- Monetize free-month cohort (30+ after 26 Sep 2026), then widen GTM

What we will not claim here

No invented TAM/SAM/SOM figures. Demand signal so far: 19 paid active users, ~10k GHS Jun–Sep revenue, 6 prop accounts passed, zero marketing spend, payers from day one through ~5 price changes.

PROGRESS

Shipped. Paid. Passing props.

EARLY
First payers from day one (started 55 GHS/mo)

FIRST LIVE WEEK
3 prop-firm accounts passed

LATE AUG → SEP 2026
More prop passes → 6 total (latest Wed before 26 Sep)

JUN–SEP 2026
~10k GHS revenue · 19 paid active · ship ~every 4 hours · free month → 30+

NEXT
Monetize free cohort · incorporate (US/Cayman/Singapore) · SF for Batch 37

Ship cadence

Open web app roughly every 4 hours. Multiple product pauses (including Sep) while still collecting subscription revenue.

Batch 37

Willing to relocate to SF. Kickoff 30 Nov 2026. Entity not yet incorporated; open to US, Cayman, or Singapore.

SCREENSHOT TBD

Live product / prop pass evidence

TEAM

Sylvester Kwabena Dapaah — solo founder.

Now

~20 · KNUST Computer Science, Level 200 · Bibiani / Kumasi, Ghana · Solo

Prior

- PRESEC entrepreneur — shoutout envelopes; Best Student Entrepreneur
- Rekon360 — ~43 users; bank intros Ecobank / GCB / OISL
- Taught prompt orchestration at SocialTech (~2 months, past)
- SE internship, Anansenet — Aug–Sep 2026 (~2 months)

Plan

- Remain solo through early product focus
- Hire GTM later
- Willing to relocate to SF for Batch 37 (kickoff 2026-11-30)
- Incorporate: open to US / Cayman / Singapore
